

# May 10 POD Update 1

Submitted by wpetersen on Tue, 05/10/2011 - 18:09

Date:

Tue, 05/10/2011

Citation take off at ~2150 UTC - spiral in stratiform northeast of NPOL from FL300 to FL240 then FL240 to lowest possible (spiral moved north after ATC hold combined with rapid moving precip to northeast) followed by long porpoise leg along melting level (1000 ft above 1000 ft below) through weaker widespread stratiform patches.

ER-2 Takeoff tomorrow still scheduled for 1500 UTC. Will convene TO-5 phone call (0500 CDT) with Chris Miller to confirm/adjust as needed.
